Code Test

Objective

To create a working HTML page using CSS for styling, based on the design provided on page 2.

Success Criteria

- Page validates at https://html5.validator.nu
- Page loads and is viewable in Google Chrome
- The site contains all of the required components listed below

Time Given

There is no time limit on this test, but the quicker you can get it back to us the quicker we can review your code.

The Task

You are required to create a PHP web page with the following criteria:

1. The page should contain a valid HTML5 doc-type and document structure.

2. Your page should have a title tag of 'My Website'.

3. Include the style.css file into your page, this can been found in the root of your website folder. The font used is a web safe font (Trebuchet MS), please add this to the styling.

4. Your page should include a header section with a navigation bar that includes the links 'Home', 'About Us' and 'Contact Us'.

5. The header section should also contain the logo provided (logo.jpg/logo.svg found in the images folder) and a telephone number as shown on the design.

6. Your page should include a main hero image that sits below the header navigation. All images that you will need can be found in the images folder.

7. You should include an Article and an Aside using the relevant tags.

8. Within the Article you should place a heading and 2 paragraphs of placeholder text (http://www.lipsum.com/). These paragraphs should be correctly marked up with the relevant tags.

9. Within your Aside you should create a heading for this section and an unordered list styled according to the design.

10. Your page should contain a footer with the following text: '© 2015 My Website Ltd.' and a sitemap (as shown on the design).

Extras

If you feel that you have the skills to complete any of the following tasks, feel free to add them to your webpage.

11. Make the website responsive from Mobile to Desktop using media queries in your css. There is a mobile design on page 3, please base your mobile version on this design, adding a mobile navigation such as mmenu (http://mmenu.frebsite.nl/).

12. Add a fancybox-style gallery using jQuery. When downloading thefancybox-style gallery, please use the 'extras' folder to add in any scripts and css files. There is a gallery folder inside the images folder which contains thumbnails and large images which you can use. Here is a link to the fancybox gallery website for more information: http://fancyapps.com/fancybox/ . Please feel free to use alternatives if you prefer.

If you feel that you have more skills to show, please feel free to add any additional styling or functionality to the webpage.

You should note down any instance where you needed to lookup or use a reference source in the space provided at the end of this document.
